

Superintegrability with Spin

İsmet Yurduşen
(joint work with Pavel Winternitz)

July 25, 2010

A systematic search for superintegrable quantum Hamiltonians involving particles with spin, is performed. We restrict to integrals of motion that are first-order polynomials in the components of linear momentum. In two- and three-dimensional Euclidean spaces several such systems are found and for one non-trivial example we show how superintegrability leads to exact solvability.

Mathematics Subject Classification 2000: 70H06

Keywords: Integrability; Superintegrability; Quantum Mechanics; Spin.
